

Great Migrations

Support Statetment: ReplaceFile for Stubs

With BuildFile= local in the translation Script (**note Fix@host must be blank**)

```
<Output Status="New" Filename="%BndPath%" />

<Author>

<Fix name="PostEdit_ReplaceFiles" host="">
  <ReplaceFile
    name="TLI file replacement"

source="\Users\mark\AppData\Roaming\GreatMigrations\workspace\Upgrade8\deploy\Scar
target="..\usr\TLI.cs"
  />
</Fix>
```

With BuildFile=Global in the GlobalStubs Script:

```
<Output Status="New" FileName="%JobId%.bnd" />
```

```
<GlobalStubs>
```

```
...
```

```
</GlobalStubs>
```

```
<Output Status="Close" />
```

```
<Fix FileFilter="%JobId%.bnd">
```

```
<ReplaceFile
```

```
name="TLI file replacement"
```

```
source="TLI.cs"
```

```
target="..\usr\TLI.cs"
```

```
/>
```

```
</Fix>
```
